

WHAT IS CLAIMED IS:

1. (Currently Amended) A printer comprising:
an input tray including an input print media support surface; and
5 an output tray including an output print media support surface;
wherein
at least one of the trays form part of an exterior side of the
printer substantially contoured with a housing of the printer when the trays are
in a closed position, and wherein the print media support surface of one of the
10 trays is positioned outboard of the print media support surface of the other
tray when the input tray and the output tray are in the closed position; wherein
the input tray is configured to prevent input print media in the input tray
that has not been circulated through the printer from contacting output print
media in the output tray that has been circulated through the printer; ~~and~~
15 wherein
the output tray is configured to prevent output print media in the output
tray that has been circulated through the printer from contacting input print
media in the input tray that has not been circulated through the printer, and
wherein
20 one of the output tray and the input tray nests inside one of the
other of the output tray and the input tray when the input tray and the
output tray are in the closed position.
7. (Currently Amended) ~~The printer of claim 3,~~ A printer
25 comprising:
an input tray including an input print media support
surface; and
an output tray including an output print media support
surface; wherein
30 at least one of the trays form part of an exterior side of the
printer substantially contoured with a housing of the printer when the

trays are in a closed position, and wherein the print media support surface of one of the trays is positioned outboard of the print media support surface of the other tray when the input tray and the output tray are in the closed position; wherein

5 the input tray is configured to prevent input print media in the input tray that has not been circulated through the printer from contacting output print media in the output tray that has been circulated through the printer; wherein

the output tray is configured to prevent output print media
10 in the output tray that has been circulated through the printer from contacting input print media in the input tray that has not been circulated through the printer, wherein

the input tray and the output tray are rotatable from the closed position to an open position and from the open position to the closed
15 position; wherein

the input tray forms part of an exterior side of the printer substantially contoured with a housing of the printer when the trays are in a closed position; wherein

the input print media support surface of the input tray is
20 positioned outboard of the output print media support surface of the output tray when the input tray and the output tray are in the closed position; and wherein

 the input tray comprises a slotted gusset on at least one side of the input tray, the gusset extending on a plane normal to an axis of rotation of the
25 input tray, and wherein a rotation boss of the output tray extends through a slot in the slotted gusset.

8. (Currently Amended) The printer of claim [[3]] 7, wherein the input tray comprises slotted gussets on two sides of the input tray, the
30 slotted gussets extending on a plane normal to an axis of rotation of the input

tray, and wherein rotation bosses of the output tray extends through a slot in each of the gussets.

15. (Currently Amended) ~~The printer of claim 3,~~ A printer
5 comprising:
an input tray including an input print media support
surface; and
an output tray including an output print media support
surface; wherein
10 at least one of the trays form part of an exterior side of the
printer substantially contoured with a housing of the printer when the
trays are in a closed position, and wherein the print media support
surface of one of the trays is positioned outboard of the print media
support surface of the other tray when the input tray and the output tray
15 are in the closed position; wherein
the input tray is configured to prevent input print media in
the input tray that has not been circulated through the printer from
contacting output print media in the output tray that has been circulated
through the printer; wherein
20 the output tray is configured to prevent output print media in the
output tray that has been circulated through the printer from contacting
input print media in the input tray that has not been circulated through
the printer, wherein
the input tray and the output tray are rotatable from the closed
25 position to a open position and from the open position to the closed
position; wherein
the input tray forms part of an exterior side of the printer
substantially contoured with a housing of the printer when the trays are
in a closed position; wherein
30 the input print media support surface of the input tray is
positioned outboard of the output print media support surface of the

output tray when the input tray and the output tray are in the closed position; and wherein

the input tray includes a rotation stop that contacts the output tray when the input tray is in the open position to limit the rotation of the output tray.

21. (Currently Amended) ~~The printer of claim 3,~~ A printer comprising:

an input tray including an input print media support surface; and

an output tray including an output print media support surface; wherein

at least one of the trays form part of an exterior side of the printer substantially contoured with a housing of the printer when the trays are in a closed position, and wherein the print media support surface of one of the trays is positioned outboard of the print media support surface of the other tray when the input tray and the output tray are in the closed position; wherein

the input tray is configured to prevent input print media in the input tray that has not been circulated through the printer from contacting output print media in the output tray that has been circulated through the printer; wherein

the output tray is configured to prevent output print media in the output tray that has been circulated through the printer from contacting input print media in the input tray that has not been circulated through the printer, wherein

the input tray and the output tray are rotatable from the closed position to an open position and from the open position to the closed position; wherein

the input tray forms part of an exterior side of the printer
substantially contoured with a housing of the printer when the trays are
in a closed position; wherein

5 the input print media support surface of the input tray is
positioned outboard of the output print media support surface of the
output tray when the input tray and the output tray are in the closed
position; and wherein

a substantial portion of the output tray nests inside the input tray when
the input tray is in the closed position.

10

(Currently Amended) 24. A printer, comprising:

an input tray including a input print media support surface; and

an output tray including an output print media support surface
separate from the input print media support surface of the input tray; wherein

15

~~the output tray nests in the input tray or the input tray nests~~
~~in the output tray~~ one of the output tray and the input tray nests inside
one of the other of the output tray and the input tray when the input tray
and the output tray are in the closed position; and wherein

the input tray is configured to prevent input print media in the input tray
20 that has not been circulated through the printer from contacting output print
media in the output tray that has been circulated through the printer

55. (Cancelled).
